SYSTEM FOR AUTOMATICALLY REPORTING A
SYSTEM FAILURE IN A SERVER

Abstract of the Disclosure

A system for reporting a failure condition in a server system which includes:

5   a controller which monitors the server system for system failures, and generates an event signal and failure information if a system failure is detected; a system interface, coupled to the controller, which receives the event signal; a central processing unit, coupled to the system interface, wherein, upon receiving the event signal, the system interface reports an occurrence of an event to the central processing unit; and a system

10   log which stores the failure information.
